

Information Technology

- The South African market is estimated in 2013 at US\$ 42.6bn
 - Information Technology accounting for US\$ 15.08bn
 - Communications accounting for US\$ 27.18bn
- The sector contributes approximately 8.2% to South Africa's GDP
- Whilst South Africa applies the world's best technology, it simultaneously reshapes these technologies to meet unique market needs and opportunities
- Our strength lies in developing packaged software solutions
- Our solutions are ideally suited to Africa and other emerging markets using ICT to address infrastructure shortcomings such as mobile banking, e-schooling, e-Government, e-health and prepayment for basic services
